Dear Mayor and Council Members;

Here is the latest data on COVID-19 in Montana.

Current Montana COVID-19 Statistics - May 11, 2020 (1:00 PM)
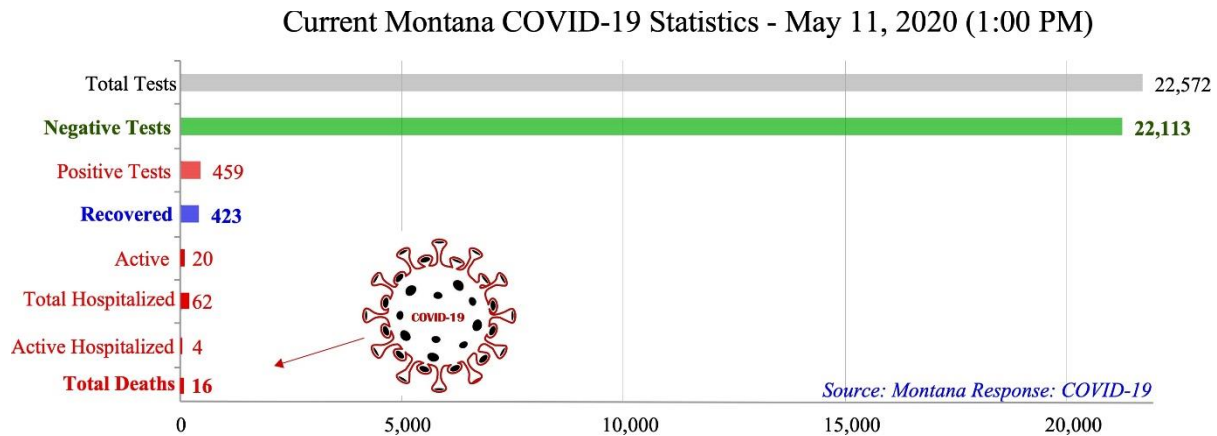

Notes:
• Montana had 10,200 deaths in 2017 *(statista.com)*. That is a normal death rate of 939 per 100,000 population.
• The 16 deaths from COVID-19 is a death rate of 1.5 per 100,000 population.
• This is 2/1,000th of Montana's normal death rate.
• Montana has 85 ICU Units and 2,202 hospital beds available in 17 Montana hospitals.
• There are 4 active hospitalized cases of COVID-19 in Montana.
• Of the 1,086,759 people in Montana, 459 have contacted COVID-19. That means 1,086,300 **(99.96%) did not.**
• Of the 1,086,759 people in Montana, 16 died. That means 1,086,743 **(99.9999%) did not die from COVID-19.**

Question:
Given these facts (data), what models, statistics and/or political opinions should prevent our City, County and State Governments from immediately re-establishing normalcy to our citizens?

Sincerely,

Larry Seekins
