

Subject: Which is more deadly? Flue or COVID-19

Dear Mayor and Council Members:

I keep hearing an argument as to which is more deadly... the flue or COVID-19.

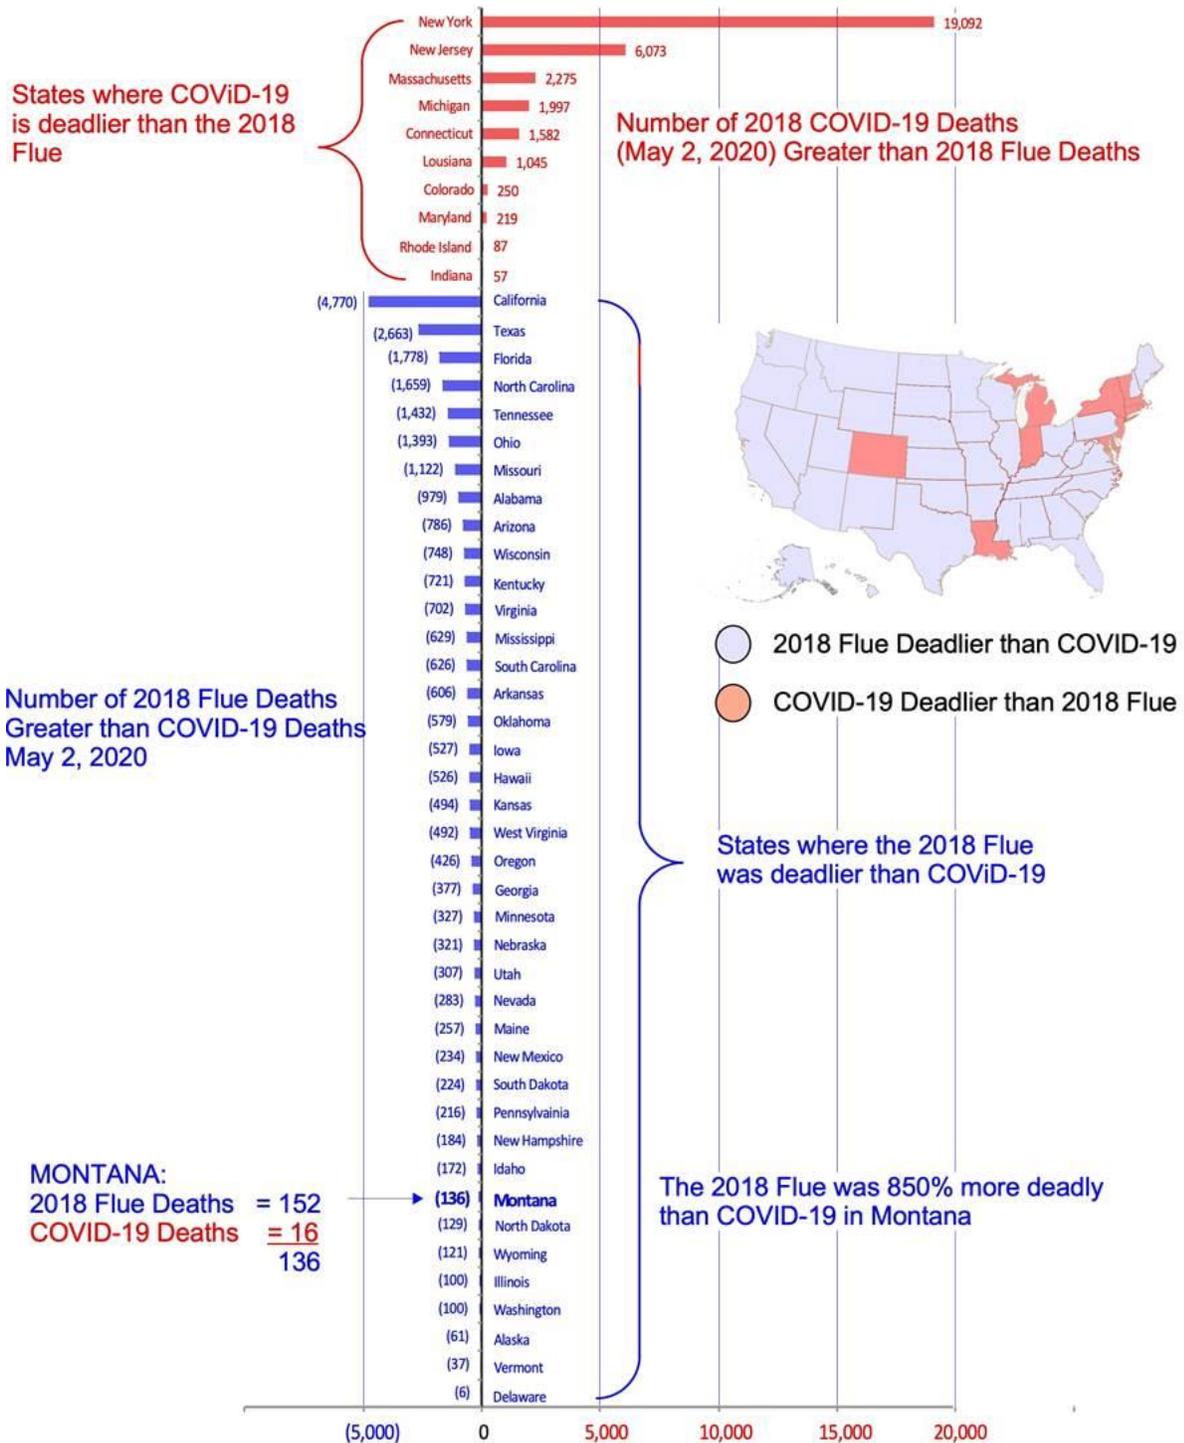

So... I decided to look it up myself.

Enclosed below is the real data comparing the difference of deaths by State between the 2018 flue and COVID-19 as of May 2, 2020.

I discovered that for Montana, the 2018 Flue was **850%** more deadly than COVID-19.

Will we be going through the same economic and social shutdown for any flue that comes along next year?

Difference in Number of Deaths by State between 2018 Flue and COVID-19 (as of May 2, 2020)

Sincerely,

Larry Seekins
