

What is Going on In America Today?

Technocracy, Globalism, & Agenda 21-30

What you are witnessing today is Technocracy - the Science of Social Engineering, the centralization of all systems, science, technology, economics and politics. All systems since the Enlightenment including Liberalism & Capitalism, Communism and Fascism are being merged into a dystopian take-over, previously not possible before our current Technology.

Want to know what a Technocracy looks like? See China, the world's first open Technocracy where tracking "vaccine" passports are just Social Credit Systems. If you don't obey, you won't get services and goods – or perhaps you'll just get imprisoned for "wrongthink". The "Pandemic" is just the battering ram to install this new Global Governance system which seeks to end any Individual Freedom and National Sovereignty by 2030.

Technocracy will implement Global Governance via Regionalizing America under UN-controlled "Zones". The fundamental financial & political structure is actually under the guise of "Climate Change" and the resulting mandates will be

spearheaded by UN Agenda 21 under “Sustainable Development” and sadly, implemented by our own City Hall.

What is the United Nations Agenda 21?

A Federal push for a UN-Defined Growth Policy in Every Community Through Grants from the Federal Government

- Receiving money through a grant ties you legally to all the constraints of the grant.
- The U.N. vision for this Growth Policy (called “Smart Growth”) is everyone living in metro areas, walking and riding bicycles, mass transit systems, no vehicles, living in high rises, no private property ownership, a reduction in the “carbon footprint”.
- This policy creates “regional authorities” that can go around government to advance the U.N.’s Agenda 21.
- This policy intentionally places low income housing in the middle of higher income single housing areas for purposes of diversity and “equity”.

- In Billings for example, their plan involves removing all streets downtown and making access to that area walkable or bikeable.

Overview of the United Nations Agenda

Objective: To restructure the peoples and nations of the world into a perfect global community as they envision it should be and put that community under a one world government. That means:

- Stipulate that all member nations of the UN cannot give rights to its citizens that are contrary to the purposes of the UN.
- Reduce population to one billion people (60-80% reduction) since that is what they have determined is the ideal size for being sustained at a prime standard of living on this planet.
- Do away with personal property rights so that most of the world will be under government control and kept as wilderness areas.
- Introduce and immerse people in a pantheistic worldview through the use of environmental regulations and restrictions so that people will see rocks and streams and owls as equal to humans. (all nature is part of “community”)
- Make treaties that propel their agenda especially regarding biodiversity (sustainable use of biological resources – They say everything could be a previous human so they must preserve habitats and have power to restrict what people do with their

property, things like harvesting quotas, emission permits, excessive access, global warming-related issues, even the redistribution of assets if the property is not being used for the “common good” through eminent domain).

Who Has Signed On to This “Smart Growth” Plan

Go to www.ICLEI.org and see

2500+ cities, towns, regions

125+ countries

25%+ of the global urban population

20%+ of the total global population

In Montana, Missoula (city and county), Bozeman, Livingston and Helena have signed

In Wyoming, Lander, Jackson and Laramie have signed
